Fork Notice

BV Registration Portal (Bachelors Virundhu ticketing)

This repository will be forked. Ongoing development and deployment of the portal will happen in the fork. This repository is the original source and reference copy.

What this means

- Day-to-day changes, feature work and production deployment are made in the fork.
- The original repository is kept as the baseline from which the fork was created.
- Anyone working on the fork should read HANDOFF.md in the repository root first.

Secrets and data

- No secrets are stored in this repository. Each environment (including the fork) must create its own.
- The fork must use its own database, Google OAuth client, Resend account and QR_SECRET.
- Payment gateway credentials are added by the owner directly in the hosting environment.

Status at time of fork

- Payments run on the mock provider only, which is disabled in production.
- A real payment gateway is still to be selected and integrated.
